

Rising Waters: A Machine Learning Approach to Flood Prediction

Brainstorm and Ideation

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Sanapala Dharani	Develop an ML model to predict floods using weather data	Machine Learning	1
2	Lahari Parnam	Create a real-time flood monitoring system using IoT sensors	IoT	2
3	Bhavana Raavi	Build a weather analysis dashboard for flood-prone areas	Data Visualization	3
4	Mujib Uddin Shaik	Develop a mobile alert system for flood warnings	Application Development	4
5	Lakshmi Usha Sree Kona	Predict flood probability using rainfall and weather patterns	Machine Learning	1
6	Team Discussion	Deploy flood prediction system using Flask and Cloud	Cloud Deployment	5

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Machine Learning-based Flood Prediction System	High	High	1	Yes

2	IoT-based Flood Monitoring System	Medium	High	3	No
3	Weather Visualization Dashboard	Medium	Medium	5	Yes
4	Mobile Flood Alert System	Medium	High	4	Yes
5	Cloud Deployment of ML Model	High	Medium	2	Yes
